| Volume 24 (1) : 2016

In Memoriam: Dr. Jaromir Oulehl a
1943-2016

Die Sonne ging unter,
bevor es Abend wurde.
... und wir glaubten,
wir hätten noch so viel Zeit ...

Worte können uns in diesem tiefen Schmerz nicht trösten. Wir können nur beten für die edle Seele meines unvergesslichen Gatten, unseres Vaters, Schwiegervaters und Opas, Herrn

Univ. Doz. Hofrat

DR. MED. VET. JAROMIR OULEHLA

Direktor des Bundesgestüts Piber
und Leiter der Spanischen Reitschule Wien a. D.

der am Samstag, dem 23. Jänner 2016, unerwartet im 73. Lebensjahr von Gott, dem Herrn, zu sich gerufen wurde.

Bescheidenheit, Pflichterfüllung den Mitmenschen gegenüber, die Liebe zu seiner Familie und zu seinem Beruf zeichneten seinen Lebensweg. In unseren Herzen lebt er weiter.

Der Trauergottesdienst für unseren lieben Verstorbenen wird am Freitag, dem 29. Jänner 2016, um 13.00 Uhr in der Stadtpfarrkirche Bad Ischl gehalten. Anschließend findet die Verabschiedung statt.

Für Deine Liebe und Fürsorge danken dir:

Mag. Hana Oulehla
Gattin

Mag. Petra Marka-Oulehla und Dipl. Ing. Alexander Marka
Tochter und Schwiegersohn

Philipp
Sohn

im Namen aller Verwandten

A-4820 Bad Ischl, Hubhanslauweg 63a

Weil Gutes wirkt und nicht verweht, erbitten die Angehörigen im Sinne des Verstorbenen von Kranz- u. Blumengaben abzusehen und statt dessen dem Sozialfond des Rotary Club Bad Ischl eine Spende zu geben.

Bestattung Arlinger

The sun went down
before it was evening,
... and we thought
we had so much time...

In our deep pain, we cannot trust just words. We can only pray for the soul
of my unforgettable husband, our father, father-in-law and grandfather,

Univ. Doz. Hofrat

DR. MED. VET. JAROMIR OULEHLA

Direktor des Bundesgestüts Piber
und Leiter der Spanischen Reitschule Wien a. D.

On Saturday, January 23, 2016, unexpectedly, God, The Lord, called him
to Him in his 73rd year of life.

Modesty, fulfilling his duty to others, love for his family, and his profession
marked his life. He lives on in our hearts.

The funeral service for our dearly departed will be held on Friday,
January 29, 2016 at 1:00 p.m. in the parish church in Bad Ischl. Interment
will follow.

We thank you for your love and caring.

Mag. Hana Oulehla

Wife

Mag. Petra Marka-Oulehla und Dipl. Ing. Alexander Marka

Daughter and Son-in-Law

Philipp

Grandson

on behalf of all relatives

A-4820 Bad Ischl, Hubhanslauweg 63a

Because good acts do not wither, the members of the family ask that you refrain from
sending wreaths and floral tributes and instead contribute a donation in the name of
the deceased to the social fund of the Rotary Club of Bad Ischl.

The Oulehla Family:
Dr. Jaromir Oulehla, his wife-Hana, his daughter-Petra, his grandson-Philipp

A Brief Biography of Dr. Jaromir Oulehla

During the 451-year history of the Lipizzan breed, there have been extraordinary individuals who have stepped in to save, protect, preserve, and perpetuate this magnificent breed of horse. Dr. Jaromir Oulehla, a veterinarian originally from Czechoslovakia, was one of those people. All of us who now enjoy the company of our Lipizzans owe him a debt of gratitude for his dedication to the breed. Here are some details of his life that you may not already know. — by Dr. Delphi Toth

It is with great sadness that we relay news of the death of our dear friend, Dr. Jaromir Oulehla, retired Director of both the Spanish Riding School and the Federal Stud Farm in Piber. Dr. Oulehla was also a long-time valued member of LANA's Board of Directors.

Jaromir Oulehla spent his earliest years in Czechoslovakia (now the Czech Republic). He was born in Groß Meseritsch on September 23, 1943 and educated at the Veterinary University in Brno where he was awarded his Doctorate in Veterinary Medicine. He began his veterinary practice in the town of Jihlava. The late 1960s was a turbulent time in Czechoslovakia, as then leader Alexander Dubček tried to restore some rights to the Czech people by decentralizing and democratizing the rigid stifling Communist system that had been imposed by the Soviet Union after World War II. This attempt to initiate more Western political reforms was called the "Prague Spring." The Soviet Union, which held Czechoslovakia as one of their most tightly controlled satellite

countries, reacted by launching a military invasion of 500,000 troops, with tanks, who forcefully stopped the people from moving towards more freedom. In the small city in which Dr. Oulehla had set up his practice, a man set himself on fire in the town square to protest the Soviet invasion. It was an intense and terrible time for the people of Czechoslovakia. Young Veterinarian Dr. Oulehla, with his wife, Hana, and only child, daughter Petra, joined the approximately 200,000 Czechs who fled to the West after this re-imposition of oppressive control by the Soviets.

They went to Vienna where Dr. Oulehla affiliated with the University of Vienna Veterinary Medicine and Research Institute. There he lectured and worked in Equine Internal Medicine, investigating contagious diseases specific to horses. He was Consultant at the Federal Stallion Barn in Stadl-Paura, where Austrian Warmbloods were inspected and licensed annually for breeding. Along with other Veterinary experts, he was called to the Piber Stud Farm during the crisis outbreak of an abortigenic variant strain of Equine Herpesvirus Type 1 (EHV-1) which killed about 10 broodmares and 30 potential foals. This outbreak was devastating to the small breeding population in Piber. Dr. Oulehla was central to controlling this outbreak. As the new Head of the Piber Stud Farm, beginning in 1983, he worked to protect and build the future of the endangered breeding program at Piber. His energy and success in Piber was noted in Vienna. In 1985, he became Head of the Spanish Riding School in Vienna as well, the first person ever to hold both director positions simultaneously.

Dr. Oulehla served in Vienna and Piber until January 2001 when the Spanish Riding School and the Stud Farm at Piber were taken from under the direct control of the Austrian government and privatized.

During his years as Director of the Spanish Riding School in Vienna and the Stud Farm in Piber, Dr. Oulehla modernized some aspects of these traditional institutions, using his current Veterinary knowledge to gently change the facilities, priorities, populations, and procedures. The ability to quarantine became more important. He studied the bloodlines, stallion and mare families, then increased the population and widened the gene pool by selectively adding from other Lipizzan stud farms, further protecting the breeding horses from risk from another disease outbreak for which this isolated herd had no resistance. To familiarize the world with the elegant Lipizzans and the beauty of classical dressage, he expanded the frequency and scope of tours by performing stallions, while also reducing their workload to protect them from overuse injuries. He encouraged active contacts among the world's Lipizzan breeding groups with the intention of improving adherence to the breed standard and thereby improving the choices made of which mares and stallions should be bred, and to whom. He conducted clinics for judging Lipizzans. He travelled widely to conduct evaluations, including in the USA, beginning in 1986. He published two definitive works on the Lipizzan: Die Spanische Reitschule zu Wein (with Mazakarini and Brabec) in 1986 and Breeding Standards in the Lipizzan Horse Population in 1996.

After his early retirement in 2000, Dr. Oulehla continued his active involvement with the Lipizzan breed, consulting with American, Austrian, British, and Australian breeding associations, as well as private breeding farms worldwide.

As noted above, he also served on the Board of Directors of our own Lipizzan Association of North America (LANA), providing sage guidance on breeding and writing scholarly articles for our magazine. One of the articles he wrote for us on breeding Lipizzans is included in this issue. We will miss his intensity, his passionate concern for our breed, his generosity, and his kindness.

My Memories of Jaromir Oulehla

by Gary Lashinsky

We first met in Washington, D.C., at the performance here of the Spanish Riding School in 1990. He was also conducting a Seminar for U.S. Lipizzan owners and breeders. Although my company was a bit at odds with the Spanish Riding School in Vienna because we produced the “World Famous Lipizzaner Stallion Show” which the Spanish Riding School believed infringed on their exclusive turf, Dr. Oulehla was ever the gentleman in our interactions from the start. He was so very knowledgeable about the breed that I knew I must get to know him better! That did eventually happen, as he was coming to the U.S.A. again in 1994 to do Lipizzan evaluations for several breeding farms, and we arranged that he came to our farm that year also.

It was such a pleasure to have him here evaluating our horses. He quickly became a dear friend and so much a part of our great and very successful breeding program for many years!

It was always such a joy to see him and my wife, Libby, having coffee and going over horse papers (although Jaromir didn't need to see papers but one time) and discussing who to breed with who and WHY! Libby was always taking notes like crazy. His mind was incredible when it came to the horses, and the things that he remembered about the bloodlines, specific mares, specific stallions, etc. It was as though he had a photographic memory!

One of my favorite memories was when Dr. Oulehla was again in Orlando, Florida doing evaluations of our horses and helping us set up the breeding for the next year. We had a Dodge Viper Club Christmas dinner scheduled during the time that he was here and so we just took him along. Great food, music and friends. I looked up, only to see Libby on the dance floor with Jaromir! She just had to get him a little more involved in the evening! He didn't dance any more that evening, but spent a lot of time talking to the Viper people. Everyone learned something new that evening, some about

horses, some about racing cars such as the Dodge Viper.

Another GREAT memory was during an evaluation, when he told me that a stallion that I had purchased at a Spanish Riding School auction years before in Münster, Germany could “breed with an alligator and it would STILL be a full Lipizzan.” That horse was Favory Bora who became very well known in the Dressage competition circuit, under the training and care of Michael Poulin. Unfortunately, Bora passed away at a young age from a very little known disease with

no cure. When I spoke with Dr. Oulehla about it, he was aware of the disease, and was heartbroken by the loss of Favory Bora; he also concurred that everything had been done that could have been.

Dr. Oulehla's sudden death is a horrible loss to us all in the Lipizzan world and to all of his Family and to his many friends around the world. There will never be another like him!

Dr. Jaromir Oulehla is survived by his loving wife Hana, daughter Petra, and beloved grandson Philipp Jaromir.

Rest in Peace, Dr. Oulehla, and know that we in the Lipizzan world will be forever grateful for all that you did for the horses, and we will do everything possible to keep YOUR legacy going.

Our deepest love and condolences to Hana, Petra and Philipp Jaromir.

MAY HIS SPIRIT ALWAYS GUIDE US ALL!

The Breeding of Lipizzaner Horses: a definitive historical treatise on the history, background, bloodlines, and principle of the Lipizzan horse

by Dr. Jaromir Oulehla

University Dozent and Doctor of Veterinary Medicine

Director of the Spanish Riding School in Vienna and of the Lipizzan Stud Farm in Piber, 1983- 2001

Member of LANA's Board of Directors

The following article was contributed to LANA's Haute École by Dr. Oulehla in 2012. We are reprinting it, to remind us of his profound depth of knowledge about breeding Lipizzans. —The Lipizzan Association of North America (LANA)

For more than 400 years, the goal of Lipizzaner breeding has been strictly to produce horses that meet precisely Vienna's imperial and royal needs, to produce horses that meet the requirements of the Spanish Riding School, and to produce horses that perpetuate special attributes and qualifications for classical riding-art, as well as for pulling imperial carriages. Only the proven best ones were allowed to pass on their attributes. This strict selection – based on exterior attributes, interior

attributes and talent – made this breed renowned worldwide. Today, Lipizzaners are still very popular, due to their exclusivity, kindness and versatile usability.

Resulting from this double task – being a riding horse as well as a carriage horse – some “defects” might occur, such as that the saddle-position is less than excellent or that the scapular region and pace do not meet exactly the requirements for sport horses nowadays.

It is difficult to make corrections here, because these characteristics are deeply embodied genetically. A fast re-breeding would bring a wide deviation; a radical change in the basis of breeding is not possible, because there are too few single individuals to execute a hard selection. A long-term correction of less

advantageous characteristics could be tried using huge intuition. Because this breed is extraordinary consolidated, a cross-breeding of two Lipizzaner breeding-lines is also possible. Diverse refinement theories, aiming at bringing in Arab, Andalusian, Lusitano or other horses, are to be rejected. Multiple historic experiences show that when efforts were made to do this, typical Lipizzaner characteristics were lost. Breeding outreach has to be found within the breed itself.

In order to keep Lipizzaner horses as a cultural heritage in a pure form, the European Commission settled the breeding rules and goals – that had been evaluated and developed in the Federal Stud Farm Piber - in the European Union on January 11th 1992. All members of the European Union, who want to gain official governmental legitimization as purebred breeding organizations, have to follow these rules which are outlined below.

Definition of the features of the breed

- (a) The Lipizzaner is the oldest breed of horses in Europe concerning selection, tradition and culture.
- (b) The phenotype of the Lipizzaner breed draws attention to its use, and the Lipizzaner proves to be particularly well-suited for classical horsemanship (haute école), for driving sports, for dressage and for leisure sports.
- (c) The Lipizzaner is an extremely expressive horse, its bearing is noble, the overall impression is harmonious, the frame is square to oblong, rarely rectangular.
- (d) The stick measure is ideally between 153 cm and 158 cm.
- (e) The head is expressive with large black eyes, a broad, flat forehead, finely chiselled jaw, adequate lower jaw movement, a straight nose line with a tolerable Roman nose.
- (f) The neck conforms with the requirements of the Baroque with a relatively strongly curved upper line and raised keeping.
- (g) The saddle position conforms with the requirements for a riding horse.
- (h) The shoulders should be long and sloping, the breast deep and broad.
- (i) The back is broad, muscular and well enclosed; the flank is powerful.
- (j) The croup is harmonious and well proportioned.
- (k) The horse has relatively short, powerful, dry extremities, clear sinews, powerful joints, and hard, neatly formed hooves.
- (l) A typical and important feature is the rather high knee action which contributes to the elegance, harmony and beauty of the parade step. The step is energetic, elastic, rhythmic and high-stepping.
- (m) There is a predominance of the traditional white or grey colour.
- (n) The inner characteristics of the Lipizzaner are hardness, endurance, contentment, ability to learn, pleasure in walking, obedience, willingness, patience and good humour.

Record of Origin

The following details must be entered in the Record of Origin:

- (a) Name
 - The name of a stallion is composed of the sire's name and the dam's name.**
 - (For example: Pluto Presciana)
 - The naming of mares shall be the responsibility of the officially registered breeding organizations or associations. The rules for registration of the Lipizzaner breeding organizations and associations are collected and filed in the stud-book of origin.
- (b) Sex, colour, markings and branding.
- (c) In the case of electronic marking, the relevant coding should be entered; the breeding organization or association keeps a register which is open for inspection regarding the use of chips for electronic marking.
- (d) Height at the withers, chest measurement, cannon-bone circumference and date of measuring the animal.
- (e) From the year 2000, blood group or DNA micro-satellite analysis.
- (f) The record of origin must contain at least five generations. If complete genealogical documentation is available, only two generations need to be entered.
- (g) The place of foaling (country) and the date of foaling should be noted.
- (h) In the parent generation, the following should also be noted:
 - **Name of associated mare's family**
 - Section of the stud-book of sire and dam depending on the subdivision of the stud-book.
- (i) The record of origin contains the name of the breeding organization or association.
- (j) Date of elimination/departure

Subdivisions of the stud-book

The stud-book of a Lipizzaner breeding organization must be subdivided at least into the following sections:

(a) Register of foals

All foals born must be entered in the register of foals with the data listed under the points listed above, (a) to (i) as applicable to foals. The entry should be based on a valid breeding certificate.

(b) Main book

The main book should be kept separately for mares and stallions.

A Lipizzaner horse should be entered in the main book at the earliest at three years of age. This entry represents registration as a breeding horse.

Only Lipizzaners whose origin can be traced back without gaps in all sections of their lineage to the **founder of the sire's lineage** and also the dam's lineage shall be registered.

All recognized stallion lines of descent and mare families are listed below. No other mare families or stallion lines of descent will be acknowledged.

At 36 months, mares should be at least 148 cm in height, stallions at least 150 cm. For use in "haute école," the horses may be between 153 cm and 158 cm in height.

Additional criteria for an entry in the main book are specified by the officially registered breeding organizations or associations. They are based on the definition of the features of the breed, the breeding goal of the organization and possibly on performance criteria.

If performance criteria for the entry of the mares and stallions are specified in accordance with the national animal breeding provisions, they must relate to the breed and contain the following points:

In riding – fulfilment of a Class L dressage exercise or

In driving – fulfilment of a Class L dressage exercise for one- or two-horse vehicles.

The records in the main book contain all data listed above in Record of Origin, letters (a) – (j).

Moreover, an exterior description at the time of making the entry should be noted. For stallions, coverings and offspring should be recorded in a cover register.

Principles for drawing up pedigrees

- Traditionally, stallions are allocated to the stallion lines of descent; the records must show an unbroken lineage which can be traced back to the **founder of the sire's line of descent** and also the dam's family.
- In the case of mares, allocation to a thoroughbred Lipizzaner lineage is traditionally implemented. Also, with mares, it must be possible to trace an unbroken, thoroughbred **lineage on both the dam's and the sire's side**.
- If during the classification of Lipizzaner horses in the course of breeding work in the stud farm or breeding organization alternations have to be made with reference to generation numbers or stud-farm numbers, these alterations must be entered in a register which show the allocation in a clear and comprehensible manner.
- From the year 2000, blood group or DNA micro-satellite analyses must be carried out at the age of a yearling. A data-bank of these analyses must be kept. The results should be enclosed with the proof of origin.
- The recognized stallion lines of descent and mare families of the Lipizzaner breed are listed below.

No other stallion lines of descent or mare families will be acknowledged.

Registered Stallion Lines of Descent and Mare Families

Stallion Lines of Descent

The six Classical stallion lines of descent are:

Pluto
Maestoso
Neapolitano
Conversano
Favory
Siglavy

Two more stallion lines of descent

Tulipan and
Incitato

are classified as equivalent to the six classical lines of descent, provided that exclusively thoroughbred Lipizzaners are proven on the sire's and the dam's side.

Mare Families

Within the framework of basic research carried out by Oulelha and Jurkovic in 1989, after the frontiers to the East European States had been opened, the stud-books of all Lipizzaner stud farms were inspected and studied. The mare families, recorded on the basis of this information by Oulelha in 1996 for his university lectureship thesis and listed below, can be regarded as complete. The stud-book for mares has been closed on this basis.

CLASSICAL MARE FAMILIES

Serial Number	Name of Family	Founder of Family Place/year of foaling	Origin
1	SARDINIA	Sardinia (Lipizzan, 1776)	Lipizza
2	SPADIGLIA	Spadiglia (Lipizza, 1778)	Lipizza
3	ARGENTINA	Argentina (Lipizza, 1767)	Lipizza
4	AFRICA	Africa (Kladrub, 1747)	Kladrub/ Lipizza
5	ALMERINA	Almerina (Kladrub, 1769)	Kladrub/ Lipizza
6	PRESCIANA/ BRADAMANTE	Presciana/ Bradamante (Kladrub, 1782/1777)	Kladrub/ Lipizza
7	ENGLANDERIA	Englanderia (Kladrub, 1773)	Kladrub/ Lipizza
8	EUROPA	Europa (Kladrub, 1774)	Kladrub/ Lipizza
9	FISTULA	Fistula (Koptschan, 1771)	Koptschan
10	IVANKA	Ivanka (Koptschan, 1754)	Koptschan
11	DEFLORATA	Deflorata (Frederiksborg, 1767)	Frederiksborg
12	GIDRANE	184 Gidrane (orig. Arab, 1841)	Lipizza
13	DJEBRIN	100 Generale Junior (Babolna, 1824)	Radautz/ Lipizza
14	MERCURIO	60 Freies Gestüt (Radautz, 1806)	Radautz/ Lipizza
15	THEODOROSTO	Theodorosta (Bukovina, before 1870)	Lipizza
16	CAPRIOLA	Capriola (Kladrub, 1785)	Kladrub
17	RAVA	Rava (Kladrub, 1755)	Kladrub
18	SAFFA	Saffa (Koptschan, 1768)	Koptschan/ Lipizza
19	SOLLA	Solla (Kladrub, 1777)	Kladrub/ Lipizza

(The families of numbers 4, 6, 13, 16, 18 and 19 will be provisionally recognized as stud families; the definitive recognition will take place after a common examination of the historical documents.)

MARE FAMILIES OF HUNGARIAN ORIGIN

Item No.	Family Name	Family founder Birthplace and year	Originating from
1	542 MAGYAR	542 Magyar Kanca	Mezőhegyes
2	759 ORIGINAL MOLDAVIAN	759 Original Moldavian (Mezőhegyes, 1804)	Mezőhegyes
